

Aisosa Naomi Enogieru

(215) 594-5163 | ne347@drexel.edu | linkedin.com/in/naomi-enogieru

EDUCATION

Drexel University

B.S. in Computer Science, Minor in Business Administration

Honors: Dean's List, Founder's Scholarship, Pennoni Honors College

Coursework: Management Information Systems, Web Development, Artificial Intelligence, Algorithms and Analysis

Expected Graduation: June 2027

GPA: 3.66

EXPERIENCE

Software Engineer Intern

June 2026 – September 2026

Microsoft

Redmond, WA

- Identified legal and contract-review workflows as priority use cases for Word's MCP integration, expanding Word capability coverage by 50% for Microsoft 365 Copilot users and reaching 10,000+ uses within 8 days of internal launch
- Interviewed target users to uncover workflow gaps in Word MCP capabilities, partnering with PMs and engineers to prioritize future features based on user needs, technical feasibility, and development timelines
- Partnered with M365 AI Product Managers and Word engineering to develop an evaluation framework spanning 50+ agent scenarios, validating multi-tool workflows and improving response reliability ahead of launch

Product Management Intern

April 2026 – June 2026

Uplify AI

Remote

- Analyzed waitlist and referral data to diagnose low participation, uncovering a friction-heavy signup flow and missing incentive structure as root causes
- Proposed and secured leadership approval for a tiered referral system, redesigning the program around milestone progression and launch-access priority to grow referral participation from 10% to 25% post-launch
- Led a team of engineers, marketers, and designers to define tier thresholds, access-priority logic, and configurable system rules, translating product requirements into an engineering-ready specification
- Drove a 30% increase in waitlist signups and 80% lift in referral campaign engagement by authoring 7 lifecycle email triggers for the referral system

Software Engineer Intern

June 2025 – September 2025

Microsoft

Redmond, WA

- Defined the query security-trimming diagnostics dashboard, prioritizing high-impact metrics engineers needed to resolve SEV-0 scenarios and reducing resolution time by 70%
- Scoped diagnostic triggering criteria using funnel analytics and API performance data, balancing diagnostic coverage with search performance and maintaining zero measurable impact on users
- Owned the product roadmap and delivery timeline across engineering stakeholders, accelerating production releases by 15%

Product Management Intern (Explore Program)

June 2024 – September 2024

Microsoft

Redmond, WA

- Analyzed 20+ customer escalation scenarios across Outlook, OneDrive, and SharePoint to identify under-recall search as the highest-impact issue area, informing product prioritization for diagnostic tooling
- Defined and designed a diagnostic solution for the prioritized under-recall issue, reducing escalation resolution time by 40% overall and 60% for under-recall tickets
- Authored product specifications and OKRs with 5+ Search engineering teams, tying success criteria to escalation resolution time

PROJECTS

Private Equity Lifecycle Simulation

April 2026 – Present

Python, React, SQL

- Owned product development for a cross-functional team of applied scientists, business students, and professors, prioritizing which stages of a 12-year private equity lifecycle to simulate versus abstract for a 12-week educational experience
- Designed an auction-based pricing mechanism to resolve contention when multiple students pursued the same target company, dynamically adjusting acquisition price based on concurrent interest to preserve realistic deal competition

Unified Workday – AI Application Automation Platform

December 2025 – January 2026

v0 (Vercel)

- Identified repetitive profile creation across Workday-hosted job applications as a key user pain point and designed a unified application platform that intelligently maps a user's standardized profile to company-specific application forms
- Designed a confidence-based matching experience that automated high-confidence fields while surfacing ambiguous matches for user review, balancing application efficiency with accuracy and user trust

LEADERSHIP

Operations Chair, Founding Executive Board, Drexel ColorStack Chapter

May 2026 – Present

- Help lead the chapter's growth and operations as a founding executive board member, building programming and infrastructure to expand opportunities and community for Black students in computing

Professional Development Director, Women In Computing Society

September 2025 – June 2026

- Rebuilt the Professional Development department after multiple years of inactivity, developing programming focused on career development and industry engagement for computing students

SKILLS

Product & Analytics Technical

Product Strategy, Product Roadmapping, PRD Writing, User Research, A/B Testing, Experiment Design, Agile/Scrum
Python, React, SQL, Git/GitHub, Azure DevOps, API Integration
